Armando Alvarado

Mobile Engineer — Flutter & Legacy-to-Flutter Migration

alvaradoarmandodev@gmail.com · +52 646 128 55 85 · linkedin.com/in/armando-al · github.com/ArmandoAl · armandoal-dev.vercel.app

Ensenada, Baja California, Mexico — Pacific Time, full overlap with US West Coast. Available as a B2B contractor or through an Employer of Record.

SUMMARY

Mobile engineer with 4+ years shipping production Flutter applications across iOS, Android, web and desktop. I specialize in migrating legacy native codebases to Flutter **without pausing feature delivery**, and in building the native bridges, architecture and documentation that let a team maintain the result after I hand it over.

EXPERIENCE

Flutter Developer / Mobile Lead — MaxiPublica

Contract (B2B) · May 2024 – Present · Remote

Automotive marketplace platform, LATAM. ~700 users across multiple dealerships.

- Migrated **7 years of native Java (Android) and Objective-C (iOS)** into a single Flutter codebase over **14 months**, unifying two platforms into one maintainable product.
- Shipped **7+ new product modules in parallel with the migration** — voice notes, scheduled replies, message comments, local drafts, conversation filters and a custom gesture-driven Kanban board — so feature delivery never paused for the business.
- Built native and platform bridges: audio capture with cross-OS format normalization, an embedded web shell, and map integration.
- Designed the application architecture: three-layer Clean Architecture, Cubit/BLoC state management and service-locator dependency injection.
- Onboarded native Java and Objective-C engineers onto Flutter, authoring the architecture documentation and per-feature templates that let them ship independently.
- Ran a security audit and remediation plan for the external marketplace integration.
- Scoped and estimated every module task-by-task — UI, API integration, OS-specific adjustments, testing and release — against committed delivery dates.

Full-Stack Developer — DataBizz

Contract · April 2026 – August 2026 · Remote

Point-of-sale system for retail operations.

- Built a complete point-of-sale system **end to end** and shipped it to production: mobile client, backend and hardware layer.
- Developed the Flutter desktop/tablet terminal (~250 Dart files) and a Dart (Shelf) REST backend with an embedded Node.js bridge service.
- Implemented the native Android terminal layer (Kotlin/Java) for point-of-sale hardware.
- Packaged a Windows installer with automated deployment scripting for on-site rollout.
- Delivered login hardening, ticket-flow analysis and open-account architecture as documented, reviewable work.

Full-Stack Developer — Tech4Good Research Lab

January 2024 – June 2025

- Delivered mid-complexity applications end to end: Flutter with Clean Architecture on the front end, .NET and MySQL on the back end.
- Deployed production APIs on **Azure** and configured push notifications through Firebase.
- Covered database design, cloud infrastructure and release management alongside development.

Mobile Developer — Fraktalweb Agency

Freelance · July 2022 – January 2024

- Built mobile applications for agency clients in **Flutter and React Native**.
- Focused on responsive, animated interfaces, using Provider (Flutter) and Redux (React Native) for reliable state management.

SKILLS

Mobile: Flutter, Dart, React Native, iOS, Android, cross-platform (mobile, web, desktop)

Native: Java, Kotlin, Objective-C, platform channels, custom native bridges

Architecture: Clean Architecture, BLoC, Cubit, Provider, Redux, dependency injection

Backend: .NET, Dart (Shelf), Node.js, MySQL, REST APIs

Cloud & Tooling: Azure, Firebase (Authentication, Messaging, Crashlytics, Analytics, Hosting), AWS CodeCommit, Git

Specialties: Legacy-to-Flutter migration, performance optimization, security auditing, architecture documentation, task-level estimation, developer enablement

EDUCATION

B.Eng. Software Engineering and Emerging Technologies — Universidad Autónoma de Baja California
